# **Performance Measures**

The Sheriff's Office has committed itself to planning based on information and data, with comparisons to national best practices and benchmarks from comparable agencies. We aim to enhance our planning processes through our performance measurement system and, if possible, to align our measures with the countywide systems. It is equally important that we align our performance measures with those required by our contract customers while keeping an eye to the concerns of our unincorporated residents as well.

Our current system of performance measures is taking shape through a variety of accountability initiatives being undertaken simultaneously at virtually all levels of KCSO activity. In 2006 the KCSO conducted a department-wide survey of unit-level success measures while at the same time testing a revised individual employee evaluation and participating in a Blue Ribbon Panel to assess corporate accountability. At the time of this report there is still much to do to define and structure a cohesive systems of measures. It is, however, extremely encouraging to have such a number of activities operating consecutively.

The KCSO will review its current and future performance measures as part of the Operational Master Plan process taking place in the latter part of 2006 and the first quarter of 2007.

The KCSO will also continue to participate in the King County Auditor's Performance Measures Work Group as well as lending support to other county performance measurement programs such as KingStat.

Until more of the above initiatives are complete, we will continue to report on the measures established in previous business plans. These established measures have been realigned with our new goals and core businesses. Some measures previously published without corresponding data have been eliminated from the list because it was evident that they either did not provide the intended information or were not feasible to report at any time in the near future. Like all agencies engaging in performance measurement, the KCSO is in an evolutionary process of assessing the value of its measured information while at the same time working to develop data collection and analysis tools to provide desired information to inform future decision making.
